

## V370/V550

Submersible pumps intended for pumping household sewage, but in case of flooding, they can be used for dewatering rooms. Solid pumps structure, material design (stainless steel, cast iron), grinding system with a cutting knife and attractive price made these pumps extremely popular with individual clients. A float switch is mounted in the pumps, allowing for automatic device operation.

In order to improve fault-free operation, the pumps are equipped with overload protection mounted on the cable.

### APPLICATION:

Pumping sewage from household septic tanks and dewatering flooded rooms.

### PARAMETERS

Name	Head (m)	Flow (l/min)	Motor power (W)	Power supply (V)	Power consumption (A)	Ports (inches)	Dimensions (cm [Diam./H])	Weight (kg)
V370	7,5	130	370	230	2,5	1¼	17/40	10,8
V550	10	300	550	230	4,6	2	24/43	18,3

## CTR-550

CTR 550 cast iron pump equipped with a grinding system with a cutting knife due to which solid elements included in pumped medium are disintegrated. A float switch is mounted in the pump, allowing for automatic device operation. In order to improve fault-free operation, the pump is equipped with overload protection mounted on the cable. The cast iron structure makes the pump resistant to mechanical damage and chemical corrosion.

UNIVERSAL APPLICATION
